GitHub

github.com/nimrabukhari956-cloud

Location

Islamabad, Pakistan

TECHNICAL SKILLS

C / C++

Python

Embedded Systems

Computer Vision

Machine Learning / Deep Learning

TensorFlow & PyTorch

MATLAB

React, TypeScript, Supabase

LANGUAGES

English

Urdu

EDUCATION

BS Computer Engineering Technology

IIUI, Islamabad

2023 – 2027

CERTIFICATIONS

✓ Arduino & Embedded Systems

✓ Python for Engineers

✓ OpenCV & Computer Vision

ABOUT ME

Motivated Computer Engineering Technologist with hands-on experience in embedded systems, robotics, computer vision, and AI-powered applications, including real-time deep learning systems deployed on edge hardware, as well as full-stack web application development. Passionate about building intelligent hardware-software solutions and scalable web platforms that solve real-world problems. Skilled in microcontroller programming, sensor integration, full-stack development, and developing innovative systems from concept to deployment. Eager to contribute technical expertise to forward-thinking engineering teams.

WORK EXPERIENCE

Web Developer Feb 2025 – Present

- Designed and developed responsive, user-friendly websites for academic and freelance clients, ensuring cross-browser compatibility and optimal performance.
- Specialized in HTML, CSS, JavaScript, and Firebase integration for scalable, user-focused applications.

KEY PROJECTS

Flowline – Full-Stack Kanban Project Management Tool 2025 – 2026

- Built a full-stack, real-time Kanban board that lets teams organise work visually across custom columns with drag-and-drop task management, replacing scattered sticky notes and outdated spreadsheets.
- Engineered instant real-time sync so task updates appear across all connected users immediately, with zero manual refresh required.
- Implemented priority levels, deadlines, ownership tracking, comments, and file attachments so teams can collaborate directly where the work lives.
- Designed role-based access control (Admin, Member, Viewer) backed by PostgreSQL row-level security to keep data properly scoped per user.
- Built with React 19 and TanStack Start for server-side rendering, TanStack Router & Query for data flow, and Supabase for authentication, database, storage, and real-time subscriptions.

📄 **GitHub:** <https://github.com/nimrabukhari956-cloud/ProjectManagementtool>

AI-Based Face Recognition Attendance System 2025 – 2026 (Final Year Project)

- Designed and developed a real-time, AI-driven attendance system using MTCNN for face detection and FaceNet (InceptionResnetV1) to generate 512-D facial embeddings, achieving up to 86% recognition confidence.
- Built a custom dataset pipeline of 1,200+ images with preprocessing, embedding generation, and cosine-similarity matching, applying threshold and margin tuning to eliminate false-positive recognitions.

Line Follower Robot 2023

- Built a fully autonomous robot using Arduino UNO with an IR sensor array for line detection and path following.
- Implemented PID control algorithm, achieving smooth, accurate navigation on complex track layouts.

Obstacle Detection System (Live Camera) 2024

- Developed a real-time obstacle detection system using a live camera feed and a custom-trained CNN model.
- Achieved 92%+ detection accuracy using OpenCV and TensorFlow for object classification and bounding boxes.
- Integrated audio/visual alert system triggering on proximity threshold breach in real time.

VIBE – Personality & Confidence App 2024

- ▶ Developed an Android app named VIBE to help users improve personality, communication skills, and self-confidence.
- ▶ Implemented interactive modules including daily exercises, progress tracking, and AI-driven feedback.

ACHIEVEMENTS & AWARDS

- ▶ Speed Wiring Certificate – Awarded for excellence in electrical wiring competition.
- ▶ AI Product Development Workshop – Completed hands-on workshop on building AI-powered products.
- ▶ Certification of completing Build with AI Workshops 2025, Powered by Google.
- ▶ Successfully completed 5+ hardware-software integrated projects during undergraduate studies, including a deep-learning-based Final Year Project and a full-stack real-time Kanban platform.
